Unternehmensprofil

Our client is one of the largest and most renowned international pharmaceutical players in Germany. Salary, benefits, development opportunities, internationality, complexity and variety of topics - there is hardly a better address in Germany.

As a globally operating group with enormous resources for business, system and employee development, one is proud of excellent employee loyalty.

Ihre Aufgaben

You are the first and key point of contact for all master data-related topics in the Customer domain. You implement, communicate and control the establishment and maintenance of uniform governance structures and strategically develop the domain. This is done in close cooperation with the executive level (globally) and the decision-makers in the various business units involved (medicine, compliance, legal, marketing, etc.) This takes place in close dialogue with IT.

The search is not only for a problem solver and data governor, but above all for a **problem finder and ambassador** who can identify optimization potential and make the concerns of the domain visible and audible in the company. It is a role for a forward thinker who does not wait for business requirements, but makes offers to the business itself. You elaborate proper concepts and then enforce the governance in projects.

Due to the variety of issues and the **strong strategic focus**, this role is not additionally equipped with the role of a project manager.

Ihr Anforderungsprofil

- a higher degree (e.g. Master's or doctorate), ideally with a focus on e.g. IT, marketing, medicine or pharmaceuticals
- Excellent analytical skills, very fast comprehension and very good ability to abstract and adapt
- Several years of experience in the field of Master Data with conceptual and strategic orientation in an international environment
- Strong communication skills towards executive level, assertiveness and standing
- Team player mentality and confident interaction in international, agile structures
- Experience e.g. in the area of customer engagement and OTC
- Fluent English
- International willingness to travel averages 30% (in peak periods up to 50% for short periods)
