### Unternehmensprofil

Our client is one of the top players in the pharmaceutical industry, one of the most secure employers in the region and offers excellent career development opportunities. Corona has not left a trail of destruction here - quite the contrary! Particularly in the pandemic, our client is a valued partner of the health care system and was able to increase its sales considerably once again. But safety is not everything. The global projects are highly demanding and offer even experienced employees new challenges time and time again. The role in the IT department is closely linked to the processes. SAP is represented in the IT landscape with almost all products and is therefore an important component. As far as modules are concerned, this applies above all to SAP EWM (currently live in decentralized form at a couple of dozen locations worldwide) and SAP PP or PP-PI. The deeper you are involved in the system, the better, but above all it is about the exchange with the relevant colleagues at eye level. SAP OER was recently replaced as a repository solution by SAP ATTP. (This is based on the HANA-DB. One is in the middle of the migration to S/4HANA.) As T&T cloud solution to connect the CMOs and 3PL to the system, one relies on TraceLink.

### Ihre Aufgaben

In essence, this is a classic in-house consulting role with regard to processes and the ability to map them on the IT side. You advise the stakeholders within the group, design and optimize templates, are responsible for the corresponding implementation in global rollout projects as a team member or (sub-)project manager, translate business requirements towards software development and work together in cross-functional teams on the holistic development of the IT landscape.

### Ihr Anforderungsprofil

- Academic background in a relevant field of study (STEM, logistics, pharma/life science or similar)
- Several years of experience as IT/SAP consultant in supply chain related topics
- Ideally in-depth knowledge of SAP WM or EWM and SAP PP or PP-PI (processes and customizing)
- Good understanding of serialization and traceability
- Solution and goal-oriented consultant mentality with strong communication skills
- Very good English knowledge
- Travel readiness in the project of 20% per year
